Even so, you need to use Wi-Fi to synchronize images with the cloud, where you can safely store them, a feature that comes in handy with the ability to "download" and "upload" thousands of images at a time. Unfortunately, it is a ways slower than the other way of doing things and is in need of significant enhancement. Lightroom is also quite scalable in terms of its ability to work with containers such as libraries and shared folders. Most likely, this feature will continue to get better in Lightroom 6. As for the application's interface, it makes good use of Android's system intents, intended to provide a standardized way for applications to share data. If you prefer "western" interfaces, the workflow is a lot easier to master and use. It is also intuitive as it supports drag and drop functions.
